### Please remember the following information for your consultation visit:

- 1 Complete list of medications you are currently taking
- 2 Medical and dental insurance documentation
- 3 Surgical referral and any radiographs available to you

Your initial appointment is an opportunity for us to review your diagnosis and discuss all available treatment options. This allows us to obtain any needed input from your dentist, primary care physician or other caregivers and order any additional tests, if necessary.

If you require IV sedation (or general anesthesia) for surgery, a pre-operative consultation is necessary. This usually results in a second appointment for your surgery. Occasionally, surgery can be performed the same day.

### When scheduled for IV sedation/general anesthesia:

- 1 Please refrain from eating or drinking ANYTHING for at least 8 hours prior to surgery, unless specifically instructed otherwise. Most medications can be taken with a small sip of water and we will confirm this the day of your consultation.
- 2 Please have a responsible adult, preferably a parent or significant other, arrive with you and be prepared to drive you home.
- 3 Please wear loose, comfortable clothing for surgery.

Remember...these are general instructions for your anesthesia and surgery. We will provide you with more detailed instructions during your consultation visit.

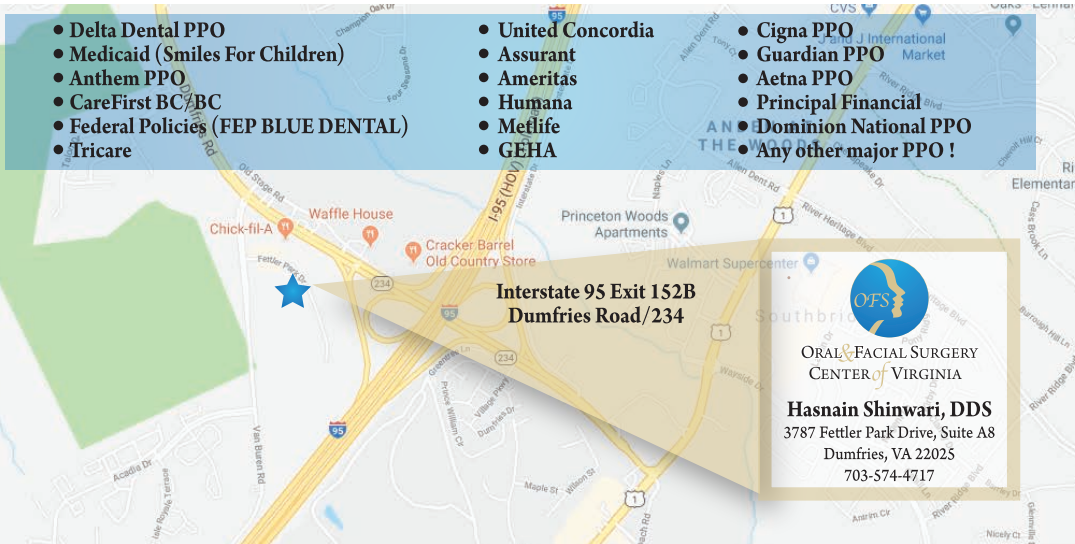

As we accept most PPO insurance plans, a portion of your responsibility will be asked to be paid on the day of your consultation with the estimated balance of your portion due the day of surgery.
